Returns shown are total returns, which assume the reinvestment of dividends and capital gains. The table and graph presented above do not reflect the deduction of taxes a shareholder would pay on Fund distributions or the redemption of Fund Shares. **Past performance is not indicative of future performance.**

### How did the Fund perform in the last year?

The Fund outperformed its primary benchmark, the Bloomberg U.S. Aggregate Bond Index, for the 12-month period ending March 31, 2025.

The Fund's largest allocations during the reporting period included SIMT Multi-Asset Capital Stability Fund, SIMT Core Fixed Income Fund, and SDIT Short-Duration Government Fund, all of which contributed positively to Fund performance. SDIT Short-Duration Government Fund was the strongest performer over the period, driven by the steepening of the U.S. Treasury yield curve, with short-term yields falling and longer-term yields static to slightly rising. Treasury Inflation-Protected Securities (TIPS) were bolstered by both the stabilization of long-term yields and inflation, as measured by the consumer-price index (CPI), remaining stubbornly high. Credit spreads remained historically tight, benefiting both investment-grade and high-yield fixed-income funds.

SIMT Liquid Alternative Fund marginally detracted from total performance over the reporting period. SIMT Global Managed Volatility Fund performed well over the period and was the largest positive contributor to Fund performance. While the U.S. equity market experienced a sharp downturn in the first quarter of 2025, the selloff was concentrated in U.S. large-cap stocks that generally exhibited higher volatility over the period. Fund performance also was bolstered by overweight allocations to international defensive sectors. The performance of SEI Enhanced Low Volatility U.S. Large Cap ETF was enhanced by exposure to both U.S. large-cap equities in the last three quarters of 2024, and to low-volatility equities in the first quarter of 2025.

The Fund is designed to have exposure to a broad range of asset classes, not all of which are reflected in its primary benchmark, the Bloomberg U.S. Aggregate Bond Index. The Fund's outperformance versus the benchmark was attributable to the exposure to equities through the holdings in SIMT Global Managed Volatility Fund and SIMT U.S. Managed Volatility Fund.
