How did the Fund perform in the last year?

The Fund modestly outperformed its benchmark, the Bloomberg A+ U.S. Credit Index (USD)—which tracks the performance of fixed-income securities with one of the three highest credit ratings—for the 12-month period ending May 31, 2025.

The Federal Reserve (Fed) surprised the markets by reducing the federal-funds rate by 50 basis points at its September 2024 meeting. The central bank subsequently implemented additional 25-basis-point cuts following its meetings in November and December 2024. The Fed then paused its rate-cutting cycle through the end of the reporting period as it continues to evaluate the effects of trade and fiscal policy on the broader economy and financial markets. Corporate spreads widened slightly over the reporting period. Volatility was muted through 2024; however, the implementation of tariffs during the first four months of 2025 caused spreads to widen materially before tightening back close to pre-tariff levels.

Fund performance for the period was enhanced by holdings in corporate bonds, particularly in the industrials and financials sectors, as well as an overweight allocation to the financials sector. An allocation to BBB rated securities contributed to Fund performance as lower-quality issues outperformed higher-quality securities over the reporting period. The Fund's position in U.S. Treasuries, which are not represented in the benchmark Bloomberg A+ U.S. Credit Index (USD), detracted from performance.

Among the Fund's sub-advisers, MetLife Investment Management, LLC benefited from an allocation to BBB rated credits. The performance of both Income Research + Management (IRM) and Legal & General Investment Management America, Inc. (LGIM) was bolstered by corporate credit selection in financial and utility sectors.

The Fund's use of derivatives had no material impact on performance for the reporting period.
