Returns shown are total returns, which assume the reinvestment of dividends and capital gains. The table and graph presented above do not reflect the deduction of taxes a shareholder would pay on Fund distributions or the redemption of Fund Shares. **Past performance is not indicative of future performance.**

\* Total Return (TR) - Reflects no deductions for fees, expenses or taxes.

### How did the Fund perform in the last year?

Class Y Shares underperformed its benchmark, the Bloomberg U.S. Aggregate Bond Index, for the 12-month period ending September 30, 2025.

The reporting period began with the Federal Reserve (Fed) reducing the federal funds rate by a cumulative total of 100 basis points (1.00%) during the last four months of 2024, bringing the target range to 4.25%-4.50% as the economy appeared to be softening. The Fed paused its rate-cutting cycle during the first eight months of 2025 as macroeconomic uncertainty accelerated during the year due to the evolving U.S. trade policy and the potential inflationary effects of tariffs on imported goods. The Fed subsequently implemented a 0.25% rate cut at its meeting in September.

The Fund's overweight and security selection in agency mortgage-backed securities (MBS) bolstered performance for the period. Security selection in corporate bonds also added to performance; this was partially offset by an underweight to the sector. An overweight allocation to asset-backed securities (ABS) benefited Fund performance, most notably positions in prime tranches and an overweight to AAA rated collateralized loan obligations (CLOs).

Among the Fund's sub-advisers, Allspring Global Investments, LLC outperformed the Fund's benchmark during the period due to security selection in corporates and securitized assets. MetLife Investment Management, LLC also outperformed, benefiting from security selection in both corporate bonds and ABS. Jennison Associates LLC performed well as its yield-curve positioning benefitted from a steeper yield curve. This was partially offset by the negative impact of defensive positioning within the corporate sector. Metropolitan West Asset Management, LLC underperformed during the period due primarily to its underweight allocation to corporate credit as spreads continued to tighten over the period.

The Fund employed derivatives during the reporting period to manage interest-rate and credit exposure. These derivatives did not have a significant impact on Fund performance.
